MULTI AWARD WINNING CLINICS

DermaConsult

A New Dermatology clinic available at SDS Rejuvenate MediSpa

This service is for anyone who has concerns that one of their moles has grown or changed in appearance, or they have developed a new mole. DermaConsult offers early detection of moles that have the potential to develop into skin cancer. This is important, as early intervention can improve prognosis and outcome and potentially offer a complete cure.

It is particularly important for people to attend if they are at high risk of skin cancer. Those at high risk include having in excess of 50 moles, or a family history of melanoma, high UV exposure –especially in childhood, have lived in a hot sunny country or have a history of blistering sunburn.

At consultation a thorough examination of your skin will be performed by the doctor and any suspicious lesions will be examined using a specialist instrument called a dermatoscope. This is a hand-held device that uses polarised light to magnify an area and allows the depth of pigment to be assessed. It is the preferred method of checking a skin lesion and can often prevent the need to perform a biopsy.

If this appointment identifies any lesion that causes the doctor concern, an appropriate referral can be organised.

Other non-malignant lesions can be kept under regular review or subsequently removed in clinic using various technologies, for example, Cryopen or laser. These methods will be fully explained during your consultation with the doctor.

This comprehensive mole and skin check by a specialist doctor is independent of the number of moles or skin lesions you require checking, unlike many clinics who charge per lesion. Should further treatment be necessary this will incur an additional fee, but this will be fully detailed by the doctor.

For further information or to book an appointment, please call our clinics:
Heswall 0151 348 4878 or West Kirby 0151 625 8080.

163–165 Telegraph Road, Heswall CH60 7SE • 158–160 Banks Road, West Kirby CH48 0RH
